**“Cold Forming Specialists”**

**Multi-Station Tubular Extrusion System  
Mitchell Serial No. PP-677**

The machine above was produced for a major supplier of automotive components in the U.S. It cold forms Cylinder Blank Tubes for power steering assemblies for the number one automaker in North America. The individual processes are not unique; however, the combination of three consecutive extrusion processes is quite unique. With no additional lubrication applied between extrusions, over 68% of cross sectional area reduction is achieved. For information on innovative cold forming techniques for your application, please contact us.
